PROGRAM OUTCOMES (PO)

- **Basic and Discipline specific knowledge:** Apply knowledge of basic mathematics, science and engineering fundamentals and engineering specialization to solve the engineering problems.
- **Problem analysis:** Identify and analyze well-defined engineering problems using codified standard methods.
- **Design/ development of solutions:** Design solutions for well-defined technical problems and assist with the design of systems components or processes to meet specified needs.
- **Project Management:** Use engineering management principles individually, as a team member or a leader to manage projects and effectively communicate about Well-defined engineering activities.

INTRODUCTION

- ❏ **Library management System** is a small program to manage library which includes the following tasks :
 - ❖ Adding new users, books and magazines/newspapers.
 - ❖ Updating Users, books and magazines/newspapers. Deleting Users, books and magazines/newspapers.
 - ❖ Creating student record.
 - ❖ Creating book record.
 - ❖ Issuing Books.
 - ❖ Depositing Books
 - ❖ Collecting Books back.
 - ❖ Searching for books, users.

continue....

- ❑ In our project we will be able to classify users , staffs or students. Classifying users allows the book issue controls, fine rates based on the classification. For example for students we will be able to issue a books at the fine rate of Rs. 1 as late fee and 3 books at the fine rate of Rs. 1 for staffs. What more, we can change this settings based on our needs. We have implemented terms of **OOPS using C++**.
- ❑ We have illustrated the concept of Classes , Objects , Manipulators , operators , Files , Control structures , String , Loops

TITLE DESCRIPTION

A library management system is software that is designed to manage all the functions of a library. It helps librarian to maintain the database of new books and the books that are borrowed by members along with their due dates.

This system completely automates all your library's activities. The best way to maintain, organize, and handle countless books systematically is to implement a library management system software.

A library management system is used to maintain library records. It tracks the records of the number of books in the library, how many books are issued, or how many books have been returned or renewed or late fine charges, etc.

You can find books in an instant, issue/reissue books quickly, and manage all the data efficiently and orderly using this system. The purpose of a library management system is to provide instant and accurate data regarding any type of book, thereby saving a lot of time and effort.

OUTPUTS:

```
LIBRARY  
MANAGEMENT  
SYSTEM  
ENROLLMENT NO: FCOG21727 & FCOG21744
```

```
MADE BY : Vidhi and Akshit  
COLLEGE: K.J Somaiya Polytechnic
```
